SoleCount

From code to App Store in 3 days

A step-by-step launch guide for a first-time iOS developer: enroll, build, test, upload, and submit. Every click and command, in order.

iPhone · iOS 18+

THE 3-DAY PLAN

Enroll in hour one. Apple controls the rest.

Two steps belong to Apple: approving your membership and reviewing your app. Realistic odds of being live within 3 days: about 1 in 4 to 1 in 3. Within 7 days: likely.

01

Day 1: enroll, build, test

First 30 min: enroll ($99/yr, Individual). Then build, test on simulator + iPhone, add icon and screenshots.

02

Day 2: set up the store

Once approved: Paid Apps Agreement, tax, bank. App record, $0.99 Pro purchase, upload to TestFlight.

03

Day 3: submit

Run the final checklist, attach SoleCount Pro to version 1.0, click Submit to App Review.

04

Then: Apple review

Usually 1-2 days, sometimes weeks. Reply fast. One rejection costs about 1-2 days.

Before you start

Have these five things ready before Day 1. Later steps need every one of them.

Enroll first: approval usually takes 24–48 hours.

- **A Mac with macOS 26.6 or later**
  You build, test, and upload from it.
- **Xcode 26 or later**
  Apple only accepts uploads built with Xcode 26+.
- **Your iPhone and its cable**
  For testing on a real device and TestFlight.
- **Apple Developer Program, US $99/year**
  Enroll as an Individual. One fee covers unlimited apps.
- **A GitHub account**
  Your code lives in the SoleCount repo. Keep it public.

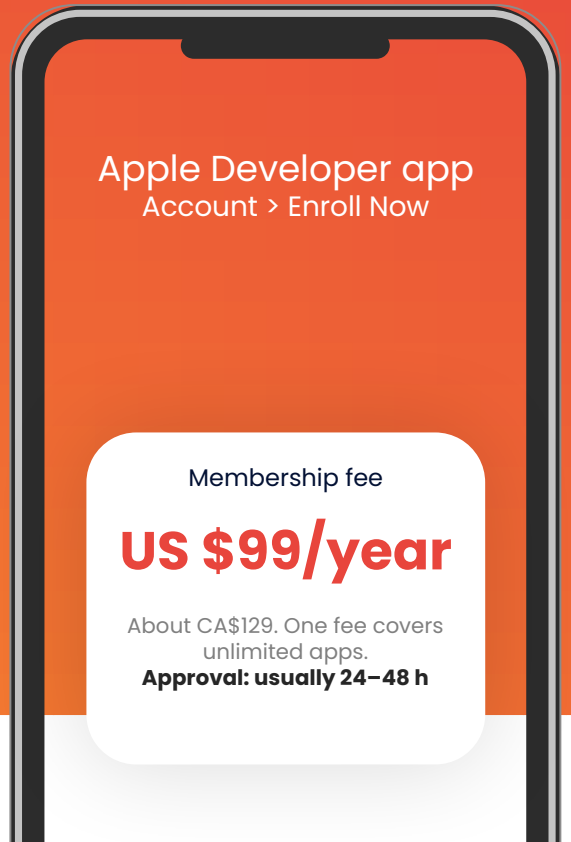

SoleCount

Bundle ID: com.krishnav.SoleCount

STEP 1 · DO THIS FIRST

Enroll in the Apple Developer Program

CHOOSE INDIVIDUAL, NOT ORGANIZATION

On your iPhone, install Apple's Apple Developer app. Tap Account, sign in, then tap Enroll Now.

Use your exact legal name, as on your ID. Two-factor sign-in must be on. Scan your ID if asked.

STEP 2 · ONCE YOU ARE APPROVED

Set up how you get paid

01 **Paid Apps Agreement**

App Store Connect > Business > Paid Apps > View and Agree to Terms > Agree.

02 **Tax form (W-8BEN)**

Click Add Tax Forms. As a Canadian individual, fill in U.S. Form W-8BEN.

03 **Bank account**

Click Add Bank Account. Enter transit, institution, and account numbers.

04 **Small Business Program**

Apply at Apple's Small Business Program page > Enroll. Apple keeps 15%, not 30%.

Wait until the agreement says Active before you submit for review.

STEP 3 · ABOUT 2 MINUTES

Create the App Store Connect API key

01

Open Team Keys

App Store Connect > Users and Access > Integrations > App Store Connect API > Team Keys

02

Generate the key

First time: Request Access. Click Generate API Key. Name: SoleCount CI. Access: Admin.

03

Download the .p8

Click Download. You can only download it once. Never put it on GitHub.

04

Copy two IDs

Copy the Key ID from the new row and the Issuer ID shown above the table.

STEP 4 · ON YOUR WINDOWS PC

Push the code to GitHub

Open Command Prompt and type these lines one at a time. Press Enter after each one.

- **Browser pop-up: sign in as KrishnaDistributedcomputing**
- **Already pushed once? Run only part 3.**

Command Prompt

```
:: 1. go to the unzipped code
> cd %USERPROFILE%\Downloads
> tar -xf SoleCount-Package.zip
> cd SoleCount-Package
:: 2. first time only
> git init
> git add .
> git commit -m "SoleCount v1"
> git branch -M main
> git remote add origin ^
  https://github.com/KrishnaDistributedcomputing/SoleCount.git
> git push -u origin main
:: 3. every later change
> git add .
> git commit -m "Describe what you changed"
> git push
```

STEP 5 · MAC SETUP

Clone the repo and run setup

In Terminal, paste each line and press Return. The script then asks for the items below and saves them in fastlane/.env, which never goes to GitHub.

- **Team ID, Key ID, Issuer ID (Step 3)**
- **Phone + email for App Review**

Terminal — zsh

```
# 1. get the code
$ git clone \
  https://github.com/KrishnaDistributedcomputing/SoleCount.git \
  ~/Desktop/SoleCount
$ cd ~/Desktop/SoleCount

# 2. one time: tools, keys, Xcode project
$ bash scripts/setup_mac.sh

# checks Xcode 26; installs Homebrew, XcodeGen, fastlane
# asks: Team ID, Key ID, Issuer ID, phone, email
# moves the .p8 to ~/.appstoreconnect/private_keys/
# then opens SoleCount.xcodeproj
```

STEP 6 · TEST IT

Test every line before Day 2

Do each check on the simulator and on your iPhone. If one fails, fix it first.

- **Photo:** Add photo opens Photos. The picture shows in the list.
- **Delete:** swipe left on a pair, tap Delete. It disappears.
- **Free limit:** with 3 pairs saved, + opens the SoleCount Pro screen.
- **Purchase:** the button says Unlock Pro for $0.99. Buy it in the StoreKit test.
- **Restore:** Settings > Restore Purchases. Pro stays unlocked, no error.
- **Relaunch:** stop and reopen. Pairs, photos, wears, and Pro are still there.

STEP 7 · APP STORE CONNECT

Create the app record

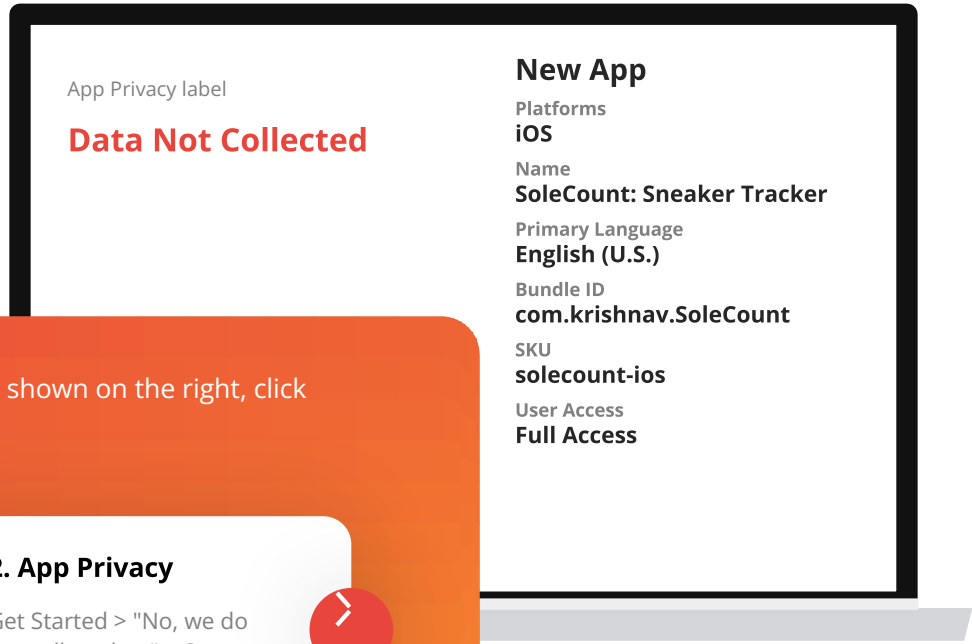

Go to appstoreconnect.apple.com. Fill in the form shown on the right, click Create, then run fastlane setup again in Terminal.

1. New app record

Apps > + > New App. Fill in the fields, then Create.

2. App Privacy

Get Started > "No, we do not collect data" > Save > Publish.

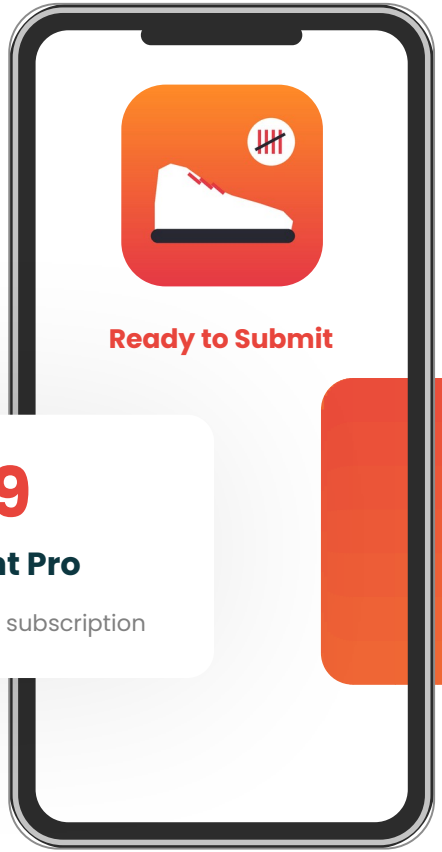

STEP 8 · EVERY RELEASE

Deploy with one command

Run it from the SoleCount folder on your Mac. It does every step on the right, then the app releases automatically once Apple approves it.

- **Stop after TestFlight: add --beta-only**
- **No Mac? Push a version tag on GitHub**

STEP 9 · FIRST RELEASE ONLY

Attach Pro to version 1.0

On the website, one time:

App Store Connect > Apps > SoleCount > Monetization > In-App Purchases > SoleCount Pro > Add for Review > pick version 1.0 > Submit for Review.

After Pro is approved, every later release submits automatically.

REJECTED? IT IS NORMAL AND FIXABLE

If Apple rejects it

1. **2.1 Crash or no price:** the price stays on "Loading price..." when the Paid Apps Agreement is not Active.
2. **3.1.1 Restore:** Apple needs a Restore Purchases button. SoleCount has it on the Pro screen and in Settings.
3. **4.2 Too simple:** explain the real features (photos, wear log, cost per wear, charts) in the description.
4. **2.3 Metadata:** fix the text or screenshots, reply, and Resubmit. No new build needed.

Reply in App Review messages (the old Resolution Center): say what you fixed and how to check it, then Resubmit.

WHAT YOU KEEP

The money math at $0.99

PER SALE

- Price: $0.99
- Apple takes 15%
- At 30%: about $0.69

~$0.84

you keep

PER YEAR

- About 600 Pro sales
- About 50 a month
- 600 x $0.84 = ~$504

~$500

from sales

AFTER THE FEE

- ~$500 from sales
- - $99/yr Apple fee
- Before income tax
- Prices vary by country

~$400

net per year

The 15% rate needs the Small Business Program (Step 2). Before it starts, Apple keeps 30%.

SoleCount

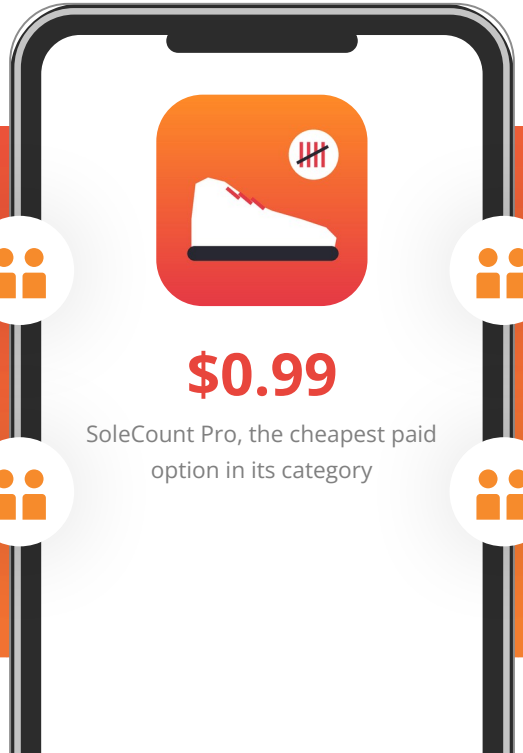

A $95–110B market with millions of collectors

$95–110B

Sneaker market in 2025, growing about 3–7% a year

20M+ buyers

StockX lifetime buyers, with 60M trades (2024)

$0.99

SoleCount Pro, the cheapest paid option in its category

60M+ members

GOAT Group, in 170 countries

~5.5M members

r/Sneakers on Reddit (about 400K active)

Sources: Grand View Research, Mordor Intelligence, Dataintelo (market size).

StockX (2024), GOAT Group, prowlo.com subreddit stats (Oct 2026).

SOLECOUNT'S POSITION

Simplest sneaker cost-per-wear tracker, $0.99 once, no account, no subscription, data stays on your phone.

Most sneaker trackers charge $4.99–$50 one time, or $2.99–$4 a month. SoleCount is $0.99 once. Sneakerbox is free, so SoleCount has to win on polish, charts and App Store keywords.

Source: MARKET-ANALYSIS.md section 2 (App Store listings and developer pages).

COMPETITORS

Who else tracks sneakers

Sole: Sneaker Collection

Free for 50 pairs. Pro $4.99 or $39.99

Rotation

Free. Pro $4/mo, $25/yr or $50 lifetime

SoleShelf

Free for 25 pairs. $2.99/mo, $14.99/yr or $24.99 once

Sneakerbox (closest competitor)

Free, offline, no subscription. Win on polish, charts, keywords

Stylebook

$4.99 paid app. Whole wardrobe, with cost per wear

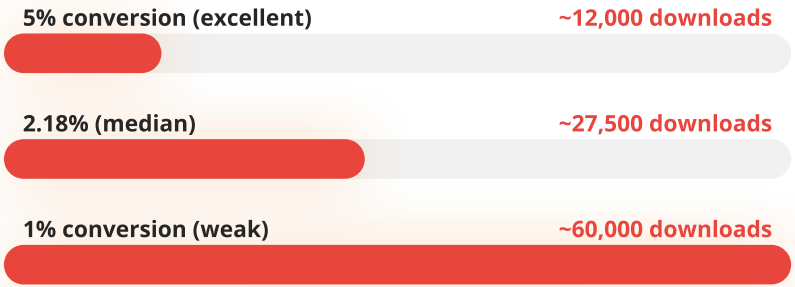

Shoe Health

Free for 3 pairs. $2.99/mo, $19.99/yr or $59.99 lifetime

THE $500 GOAL

Is 600 sales a year realistic?

Downloads you need each year to make 600 Pro sales:

Source: RevenueCat, State of Subscription Apps 2025 (75K+ apps). It measures subscription apps, not $0.99 one-time unlocks, so treat it as a rough guide.

4 cheap ways to get downloads

1. **TikTok and Reels:** post sneaker rotation and cost-per-wear videos, with a screen recording of the app.
2. **r/Sneakers (about 5.5M members):** share honestly as the builder and follow the self-promotion rules.
3. **App Store keywords:** sneaker tracker, cost per wear, shoe rotation, sneaker collection, kicks.
4. **Product Hunt or promo codes:** launch on Product Hunt, and give free Pro codes to small sneaker creators.

Bottom line: 600 sales a year is reachable only if you market the app every week.

TICK EVERY BOX

One-page checklist

BEFORE DAY 1

Have these ready. Then work through the four boxes on the right, in order.

- ✓ **Mac with macOS 26.6+ and Xcode 26+**
- ✓ **iPhone and its cable**
- ✓ **$99/yr Apple Developer Program**
- ✓ **GitHub account**

DAY 1

- [ ] Step 1: enroll in the Apple Developer Program first
- [ ] Step 4: push the code to GitHub from Windows
- [ ] Step 6: test every line of the test list

DAY 2

- [ ] Step 2: agreement, W-8BEN, bank, Small Business
- [ ] Step 3: API key (Admin), save the .p8
- [ ] Step 5: bash scripts/setup_mac.sh
- [ ] Step 7: app record + Data Not Collected
- [ ] Step 8: bash scripts/deploy.sh

DAY 3

- [ ] Paid Apps Agreement shows Active
- [ ] Step 9: add $0.99 Pro to 1.0, Submit
- [ ] Answer App Review messages fast

IF NEEDED

- [ ] Rejected? Fix it, reply, Resubmit
- [ ] Market the app every week
